DHL current tracking /temperature monitoring devices

- Currently 2 x devices contained in deliveries:
  - MonT2 data logger used to provide a screen for initial identification on whether excursion may have occurred
  - TrackIT is primary monitoring device and temperature reports can be generated remotely by DHL

- Positioned on side of inner carton

- You look in upper left hand corner of the MonT2 screen
  - √ means **temperature in range**
  - **X** means **excursion may have occurred**

- If X displayed vaccines quarantined and NIP Logistics called

- Both devices are returned to courier in shipment container

DHL upgrade to all-in-one tracking/temperature monitoring device

- Deliveries from **28 Nov** will contain TrackIT V3 all-in-one remote tracking/temp monitoring device with LCD screen

- Same positioning on side of inner carton as current devices

- Ambient light on opening delivery box wakes up the screen

- A blue light on the device indicates data is being transmitted to server

- Look in upper left hand corner of screen
  - √ means **temperature in range**
  - **X** means **excursion may have occurred**
  - **If screen not working - push button**

- If X is displayed or screen not working after pushing button, quarantine vaccines and call NIP Logistics

- Place device back in shipment container for courier to return to warehouse as usual
